Intro to Computer Systems :: Project 11: Compiler - Code Generation

Student name:

Grading method

In evaluating your compiler code we will look into the following things:

- **Code quality:** since we provided the software design, your code will be judged mainly for elegance and readability.

- **Correctness:** your compiler must translate correctly the supplied jack programs: Seven, Dec-to-bin Conversion, Square Dance, Average, Pong and Complex Arrays (we call this "dry test"). In addition, it must translate correctly some additional Jack programs that were not supplied (we call this "wet test").

Category	Points	Comments
Packaging	/ 5	Directory (folder) with your name on it, containing (1) /src directory of your code, (2) a README file with instructions for compiling and running your program, and comments on things that don't work and how you tried to fix them.
Code quality:	/ 30	
Dry test:	/ 40	
Wet test:	/ 25	

Total grade: _____
